SUMMARY

Data professional with 1.3 years of experience across analysis and machine learning. At BizTraffics, I turn campaign and business data into decisions a team can act on: bringing data together from websites, ad platforms and lead sheets, cleaning and checking it, and working out what is driving results. Before that, a six-month internship at Hisan Lab gave me hands-on experience building demand forecasting models and Power BI dashboards on live retail sales data. I enjoy both sides of the work: answering "why did this number move?" with SQL, Python and Power BI, and building models that predict what happens next. I have also built two end-to-end projects, including a purchase-intent model with a full MLOps pipeline. Looking for a Data Analyst or Data Scientist role.

SKILLS

Programming: Python, SQL
Libraries & Frameworks: Pandas, NumPy, Scikit-learn, XGBoost, TensorFlow, PyTorch, Matplotlib, Seaborn, NLTK, spaCy
Marketing & Data Analytics: Funnel Analysis, Campaign Performance, Conversion Tracking, Data Cleaning & Validation, EDA, Statistical Analysis, KPI Reporting
Machine Learning: Regression, Classification, Clustering, ARIMA, Feature Engineering, Model Evaluation, Hyperparameter Tuning, SMOTE
Deep Learning & NLP: ANN, CNN, RNN, LSTM, GRU, Encoder-Decoder, Attention Mechanism, Tokenization, Word Embeddings, NER, Sentiment Analysis
Data Visualization & BI: Power BI, DAX, Power BI Service, Tableau, Excel
Databases & Tools: MySQL, PostgreSQL, FastAPI, Docker, Git, GitHub, MLflow, Jupyter Notebook, VS Code, CI/CD

EXPERIENCE

Data Analyst — BizTraffics India Pvt. Ltd. ***Aug 2025 – Present***

- Brought data from the website, ad platforms (Google Ads, Meta Ads), Google Analytics and CRM/lead sheets into one clean, regularly updated dataset.
- Cleaned and validated incoming data (duplicates, missing values, tracking errors) so every report used numbers the team could trust.
- Monitored conversion and event tracking and flagged it straight away when numbers stopped adding up.
- Studied traffic, user behaviour, lead quality and campaign performance, and analyzed the click-to-enquiry-to-conversion funnel to recommend where budget and effort should go next.
- Built Power BI dashboards and regular reports that turned campaign data into clear next steps for the team.

Data Analyst (Internship) — Hisan Lab Pvt. Ltd. ***Feb 2025 – Jul 2025***

- Analyzed 50,000+ retail transactions across 20+ product categories using SQL and Python to surface seasonal demand trends and slow-moving inventory.
- Built a demand forecasting model (Linear Regression + ARIMA) that improved forecast accuracy by ~15% over manual estimates.
- Automated the weekly sales-reporting workflow in Python/Pandas, cutting reporting effort from ~6 hours to under 1 hour per week.
- Designed a Power BI dashboard tracking revenue, stock levels and top/bottom-performing SKUs across 10+ stores, used in weekly team review meetings.
- Built automated data-validation checks that caught inventory mismatches before they turned into stockouts.

PROJECTS

Marketing Funnel & Campaign Performance Dashboard - *Python, Pandas, SQL, SQLite*

- Built an end-to-end funnel analysis on a simulated six-month dataset (12 campaigns, 6 channels, ~10,000 leads): cleaned it in Python (149 duplicate leads removed, sessions estimated for 9 campaign-days with broken tracking) and loaded it into SQL.
- Compared channels on cost per lead, lead-to-customer rate and ROAS using SQL joins and CTEs; found Search and Email delivered 86% of customers on 47% of spend, while Meta, Display and YouTube returned under Rs. 1 per Rs. 1 spent.
- Built an interactive dashboard with a channel filter, funnel drop-off view and monthly trend, and recommended pausing the weakest campaign and reallocating its budget.

Shoppers Intent MLOps - *Python, Scikit-learn, XGBoost, LightGBM, MLflow, FastAPI, Docker, PostgreSQL, GitHub Actions*

- Built a production-grade MLOps system that predicts whether an online shopping session ends in a purchase: ETL (MySQL → Python → PostgreSQL), training, tracking, serving, monitoring and automated retraining.
- Trained and compared Random Forest, XGBoost and LightGBM with GridSearchCV tuning and SMOTE for the heavy class imbalance, reaching 97.3% ROC-AUC; the winning model is auto-logged and versioned in MLflow.
- Deployed the model behind a FastAPI endpoint with Docker and GitHub Actions CI/CD, plus Evidently AI drift monitoring and an APScheduler job that retrains the model daily if performance slips.

EDUCATION

Bachelor of Science (B.Sc.) - RTMNU University, Nagpur

CERTIFICATIONS

- SQL Certificate - HackerRank
- Data Science Essentials with Python - Cisco Networking Academy
